

Solar Dinar

Ending Inflation and deflation, Starting Fair Economics

The Problem

Paper money has no real value and causes inflation.
Digital currencies consume massive energy without real production.
Gold is limited and hinders economic growth.

The Solution

Making energy - the foundation of all value - into currency itself
1 kWh = 1 Solar Dinar

How It Works?

Produce clean energy (solar, wind, hydro).
Smart meter measures production accurately.
System issues secure digital currency.
Currency circulates in daily transactions.

Why This System is Better?

Inflation-resistant - no currency issuance without real production.
Resists deflation: Helps promote economic growth and balances economic strength with monetary liquidity.
Long-term stability - energy is a basic human need.
Decentralized - anyone can participate according to their capacity.
Environmental sustainability - incentivizes green energy investment.

The Beginning

Start with small communities, then expand naturally over time.

The Future

A cycle of economic growth, monetary stability, and social justice.
